

A word from Paxton's dad...

Paxton Howard was born on April 22, 2010, three weeks early, at 4 lbs and 5 oz. In utero, he had an enlarged brain ventricle and signs of growth delay. On his first day, he developed "blueberry muffin" spots, a sign of an infection and still to be determined neurological and physiological issue. Additionally, he suffers from the muscle disorder hypotonia (so he can't support himself to sit, crawl or walk) and gross motor skill and speech delay. Your \$50 donation will help Paxton with his ongoing needs and physical, occupational, and speech therapies. And, someday, I'll tell him about this event and how his new friends came out to show their love and support for him. Thank you!

-John Hodge
